

Services – Quality Assurance & Inspections

We believe in quality assurance rather than quality control. This belief powers our enthusiasm pro-activeness in taking necessary steps for quality assurance.

We follow a two-level quality assurance model, which focuses on both in-process and final product inspection. Our in-process inspections ensure that all shortcomings found in the products are addressed by the manufacturer while production process is on which in turn avoids any waste or delay in shipment. The final product inspection ensures high quality of product is shipped to you.

To ensure the products meet the quality parameters we avail the services of external agencies like SGS, TUV, UL, EC and other specialized test agencies. We ensure products sold to you are as per REACH/EU regulations and we provide relevant certificates wherever applicable.
